

XML 2 SMS

send sms via http

power to you

Quick Facts

- Send SMS via HTTP to all local and international networks
- Easily integrate into any system
- 2-Way SMS (Send and Receive)
- Allows for EMS (Extended Messages)
- Volumes from a few hundred to a few hundred thousand.

Introduction

Designed for developers, the XML / HTTP interface will allow you to send and receive SMS messages and query current and historical logs using HTTP request and XML response.

This provides the Developer with a comprehensive, customizable and scalable SMS functionality.

The benefit of this service is that there is no interference with existing firewall or security infrastructure, and it can be speedily integrated into your system.

XML 2 SMS also includes an EMS option, which allows for messages of up to 2,000 characters.

Functions

Functions include:

- Sending SMS
- Receiving SMS
- Querying Received and Sent (Historical) logs

Call-Backs

These can be setup to allow for incoming messages as well as delivery reports to be sent to you over HTTP.

Costs

| SMS Range | Cost |
|-------------------|---------------------------|
| 5000 | R1 600.00 (R0.32 per SMS) |
| 5001 - 10 000 | R0.30 |
